## Flexible Scope

The flexible scope enables the Certification Body to include certification for the same or similar schemes against standards that are not specifically listed in this schedule, providing that:

- new revisions of product standards (where the product standard is already included in the denoted scheme) and the changes do not affect the technical requirements of the scheme and/or the competence requirements
- new standards that are technically equivalent to the standards already included under BSI Assurances UK Limited's accredited scope and where competence requirements for the new standard have already been demonstrated

The Flexible Scope is managed through in-house procedure EMCP266 – Managing Accreditation Scopes – Product Certification, and the list of standards implemented under Flexible Scope are documented in EMCF112 Standards Database

This flexible scope does not currently extend to include certifications of UKCA or CE+UKNI (UKAB) regulatory schemes, the Building Information Modelling (BIM) scheme or Trust Service Provider schemes

Information about flexible scopes of accreditation is available in UKAS document GEN 4.
