Flexible Scope

The flexible scope enables the Certification Body to include certification for the same or similar schemes against standards that are not specifically listed in this schedule, providing that:

- new revisions of product standards (where the product standard is already included in the Intertek scheme) and the changes do not affect the technical requirements of the scheme and/or the competence requirements
- new standards that are technically equivalent to the standards already included under Intertek's accredited scope and where competence requirements for the new standard have already been demonstrated

Flexible scope is managed through in-house procedure LMS-EMEA-UK-SP-11 for flexible accreditation scope, which defines the boundaries of technical equivalence.
This flexible scope does not currently extend to include UKAB and TAB related activities.

Information about flexible scopes of accreditation is available in UKAS publication GEN 4.
