VERIFICATION OF HARDNESS MACHINES IN SERVICE			
Direct verification of Rockwell Hardness Calibration Machines	Rockwell scales: A, B, C, D, E, F, G, H, K, L, M, P, R, S, V, N, T, W, X and Y Force Time Length	See Note 1 0.12 % force 0.10 second 0.13 μm	Note 1 The calibration / verification shall be in accordance with the requirements of BS EN ISO 6508-2:2015, BS EN ISO 6508-3:2015 and / or ASTM E18-24 Accreditation is limited to machines manufactured by Indentec Hardness Testing Machines Ltd & Zwick Roell. Accreditation excludes Rockwell portable hardness testing machines
Indirect verification of Rockwell Hardness Calibration Machines	Rockwell scales: HRA Scale 80 to 85 70 to 80 60 to 70 HRBW Scale 80 50 to 80 10 to 50 HRC Scale 60 to 70 40 to 60 20 to 40 HRD Scale 70 to 80 50 to 70 40 to 50 HREW Scale 89 75 to 89 65 to 75 HRFW Scale 87 70 to 87 40 to 70 HRGW Scale 80 40 to 80 10 to 40	See Note 1 0.15 HRA 0.16 HRA 0.28 HRA 0.42 HRBW 0.87 HRBW 1.36 HRBW 0.31 HRC 0.32 HRC 0.37 HRC 0.17 HRD 0.25 HRD 0.27 HRD 0.54 HREW 0.54 HREW 0.54 HREW 0.40 HRFW 0.40 HRFW 0.54 HRFW 0.30 HRGW 0.30 HRGW 0.76 HRGW

Appendix - Calibration and Measurement Capabilities

Introduction

The definitive statement of the accreditation status of a calibration laboratory is the Accreditation Certificate and the associated Schedule of Accreditation. This Schedule of Accreditation is a critical document, as it defines the measurement capabilities, ranges and boundaries of the calibration activities for which the organisation holds accreditation.

Calibration and Measurement Capabilities (CMCs)

The capabilities provided by accredited calibration laboratories are described by the Calibration and Measurement Capability (CMC), which expresses the lowest measurement uncertainty that can be achieved during a calibration. If a particular device under calibration itself contributes significantly to the uncertainty (for example, if it has limited resolution or exhibits significant non-repeatability) then the uncertainty quoted on a calibration certificate will be increased to account for such factors.

The CMC is normally used to describe the uncertainty that appears in an accredited calibration laboratory's schedule of accreditation and is the uncertainty for which the laboratory has been accredited using the procedure that was the subject of assessment. The measurement uncertainty is calculated according to the procedures given in the GUM and is normally stated as an expanded uncertainty at a coverage probability of 95 %, which usually requires the use of a coverage factor of $k = 2$. An accredited laboratory is not permitted to quote an uncertainty that is smaller than the published measurement uncertainty in certificates issued under its accreditation.

Expression of CMCs - symbols and units

It should be noted that the percentage symbol (%) represents the number 0.01. In cases where the measurement uncertainty is stated as a percentage, this is to be interpreted as meaning percentage of the measurand.
Thus, for example, a measurement uncertainty of 1.5 % means $1.5 \times 0.01 \times q$, where q is the quantity value.

The notation Q[a, b] stands for the root-sum-square of the terms between brackets: $Q[a, b] = [a^2 + b^2]^{1/2}$
