# Calibration performed by the Organisation at the locations specified below

## Locations covered by the organisation and their relevant activities

#### Laboratory locations:

Location details		Activity	Location code
Address National Physical Laboratory Hampton Road Teddington Middlesex TW11 0LW	Local contact Mr Tahir Maqba, Customer Services Manager Tel: +44 (0)20 8943 6796 Fax: +44 (0)20 8614 0482 Email: tahir.maqba@npl.co.uk	CalibrationChemicalMassDensity andOpticalVolumePressureDimensionalRadiologicalElectromagneticTemperatureFibre opticsTime and FrequencyFlowUltrasonicsForceUnderwater AcousticsHumidity	Teddington
Address Wraysbury Reservoir Coppermill Road Wraysbury Middlesex TW19 5NW	<b>Local contact</b> Mr J Ablitt Tel: +44 (0)20 8943 6695 Email: justin.ablitt@npl.co.uk	Calibration Underwater Acoustics	Wraysbury

### Site activities performed away from the locations listed above:

Location details	Activity	Location Code
<b>Customer's sites or premises</b> The customer's site or premises must be suitable for the nature of the particular calibrations undertaken and will be the subject of contract review arrangements between the laboratory and the customer.	<u>Calibration</u> <u>Time and Frequency</u> <u>Chemical</u> (Environmental air quality monitoring instruments)	Customers' sites

	Schedule of Accreditation issued by United Kingdom Accreditation Service 2 Pine Trees, Chertsey Lane, Staines-upon-Thames, TW18 3HR, UK					
	NPL Management Ltd					
0478	Issue No: 143 Issue date: 11 July 2025					
Accredited to ISO/IEC 17025:2017						
Ca	libration performed by the Organisation at the locations specified					

Measured Quantity Instrument or Gauge	Range	Expanded Measurement Uncertainty ( <i>k</i> = 2)	Remarks	Location Code
DC VOLTAGE Service Reference ED01			Direct comparison against Josephson Junction array.	
Standard cells, not thermostated	1.018 V nominal	0.090 µV/V	Measured in a thermostated air enclosure at 20 °C.	
Standard cells in a thermostated enclosure	1.018 V nominal	0.090 µV/V		
Electronic reference standards	1.0 V 1.018 V 10 V	0.14 μV/V 0.14 μV/V 0.020 μV/V	Supplementary data can be supplied showing detailed behaviour of standard cells or electronic devices.	
DC RESISTANCE			Using build up technique referred to quantum Hall resistor.	
Service Reference ED02	0.1 mΩ 1 mΩ 10 mΩ 100 mΩ 1 Ω 10 Ω 25 Ω 100 Ω 1 kΩ 10 kΩ	2.5 μΩ/Ω 0.85 μΩ/Ω 0.80 μΩ/Ω 0.18 μΩ/Ω 0.060 μΩ/Ω 0.050 μΩ/Ω 0.050 μΩ/Ω 0.050 μΩ/Ω 0.050 μΩ/Ω 0.050 μΩ/Ω	4 terminal resistors at temperatures between 17 °C and 25 °C and at or less than 1 mW power dissipation	Teddington
	100 kΩ 1 MΩ 10 MΩ 100 MΩ	0.080 μΩ/Ω 0.12 μΩ/Ω 0.20 μΩ/Ω 0.40 μΩ/Ω	2-terminal resistors at temperatures between 17 °C and 25 °C and at or less than 1 mW power dissipation. Values >10 k $\Omega$ are not measured in oil.	
	1 GΩ	1.6 μΩ/Ω	Measured in a 2-terminal configuration, in air, at 20 °C or 23 °C.	
Temperature Coefficient	α β	0.0020 μΩ/Ω Κ <sup>-1</sup> 0.0010 μΩ/Ω Κ <sup>-2</sup>	Resistance measurements at 4 temperatures in the range 15 °C to 30 °C. Uncertainty dependent on fit to curve and nominal value of resistor.	
Current Carrying Resistors	100 μΩ to 10 Ω 30 mA to 50 A 20 A to 100 A	0.50 μΩ/Ω to 5.0 μΩ/Ω 5.0 μΩ/Ω to 10 μΩ/Ω	Using ratio techniques.	

# CALIBRATION AND MEASUREMENT CAPABILITY (CMC)

## Appendix - Calibration and Measurement Capabilities

## Introduction

The definitive statement of the accreditation status of a calibration laboratory is the Accreditation Certificate and the associated Schedule of Accreditation. This Schedule of Accreditation is a critical document, as it defines the measurement capabilities, ranges and boundaries of the calibration activities for which the organisation holds accreditation.

## Calibration and Measurement Capabilities (CMCs)

The capabilities provided by accredited calibration laboratories are described by the Calibration and Measurement Capability (CMC), which expresses the lowest measurement uncertainty that can be achieved during a calibration. If a particular device under calibration itself contributes significantly to the uncertainty (for example, if it has limited resolution or exhibits significant non-repeatability) then the uncertainty quoted on a calibration certificate will be increased to account for such factors.

The CMC is normally used to describe the uncertainty that appears in an accredited calibration laboratory's schedule of accreditation and is the uncertainty for which the laboratory has been accredited using the procedure that was the subject of assessment. The measurement uncertainty is calculated according to the procedures given in the GUM and is normally stated as an expanded uncertainty at a coverage probability of 95 %, which usually requires the use of a coverage factor of k = 2. An accredited laboratory is not permitted to quote an uncertainty that is smaller than the published measurement uncertainty in certificates issued under its accreditation.

## Expression of CMCs - symbols and units

It should be noted that the percentage symbol (%) represents the number 0.01. In cases where the measurement uncertainty is stated as a percentage, this is to be interpreted as meaning percentage of the measurand. Thus, for example, a measurement uncertainty of 1.5 % means  $1.5 \times 0.01 \times q$ , where *q* is the quantity value.

The notation Q[a, b] stands for the root-sum-square of the terms between brackets:  $Q[a, b] = [a^2 + b^2]^{1/2}$
