Calibration and Measurement Capability (CMC)

Measured Quantity Instrument or Gauge	Range	Expanded Measurement Uncertainty ($k = 2$)	Remarks	Location Code
WEIGHING INSTRUMENTS				S
	200 mg	0.009 mg		
	500 mg	0.012 mg		
	1 g	0.020 mg		
Non-automatic weighing machines (From 1 mg to 1000 kg)	5 g	0.025 mg	1. Weights are available in OIML Class:	
	10 g	0.033 mg		
	20 g	0.046 mg		
	50 g	0.074 mg	E2 from 1 g to 500 g, Max. grouped load 2 kg	
	100 g	0.14 mg		
	200 g	0.28 mg		
	500 g	0.70 mg	F1 from 1 g to 10 kg, Max. grouped load 50 kg	
	1 kg	1.4 mg		
	2 kg	2.8 mg	M1 from 10 kg to 20 kg. Max grouped load 1000 kg.	
	5 kg	38.6 mg		
	10 kg	77.2 mg		
	20 kg	150 mg		
	50 kg	390 mg	2. Other loads within the overall listed range may also be used.	
	100 kg	7.7 g		
	200 kg	16 g		
	500 kg	39 g	3. Calibration method in line with the requirements of Euramet guide cg-18	
	1000 kg	77 g		
TEMPERATURE				
Probes with or without indicators	-40 °C to 155 °C	0.09 °C	Calibration in a dry block	P & S
	155 °C to 250 °C	0.39 °C		
	250 °C to 350 °C	0.63 °C		
	350 °C to 660 °C	0.89 °C		
Dry Block Calibrators	-40 °C to 155 °C	0.09 °C	Uncertainites may Increase due to the Gradients within the dry block	
	155 °C to 250 °C	0.09 °C		
	250 °C to 350 °C	0.09 °C		
	350 °C to 660 °C	0.09 °C		
ELECTRICAL				
Simulation of Base Metal Thermocouples			Including reference junction compensation	P & S
Type K	-200 °C to -100 °C	1.2 °C		
	-100 °C to 1370 °C	0.44 °C		
Type J	-200 °C to -100 °C	1.1 °C		
	-100 °C to 1200 °C	0.38 °C		
Type T	-200 °C to -100 °C	1.3 °C		
	-100 °C to 400 °C	0.33 °C		
Type N,	-200 °C to -100 °C	1.3 °C		
	-100 °C to 1300 °C	0.34 °C		
Type E	-100 °C to 0 °C	0.60 °C		
	0 °C to 1000 °C	0.35 °C

Appendix - Calibration and Measurement Capabilities

Introduction

The definitive statement of the accreditation status of a calibration laboratory is the Accreditation Certificate and the associated Schedule of Accreditation. This Schedule of Accreditation is a critical document, as it defines the measurement capabilities, ranges and boundaries of the calibration activities for which the organisation holds accreditation.

Calibration and Measurement Capabilities (CMCs)

The capabilities provided by accredited calibration laboratories are described by the Calibration and Measurement Capability (CMC), which expresses the lowest measurement uncertainty that can be achieved during a calibration. If a particular device under calibration itself contributes significantly to the uncertainty (for example, if it has limited resolution or exhibits significant non-repeatability) then the uncertainty quoted on a calibration certificate will be increased to account for such factors.

The CMC is normally used to describe the uncertainty that appears in an accredited calibration laboratory's schedule of accreditation and is the uncertainty for which the laboratory has been accredited using the procedure that was the subject of assessment. The measurement uncertainty is calculated according to the procedures given in the GUM and is normally stated as an expanded uncertainty at a coverage probability of 95 %, which usually requires the use of a coverage factor of k = 2. An accredited laboratory is not permitted to quote an uncertainty that is smaller than the published measurement uncertainty in certificates issued under its accreditation.

Expression of CMCs - symbols and units

It should be noted that the percentage symbol (%) represents the number 0.01. In cases where the measurement uncertainty is stated as a percentage, this is to be interpreted as meaning percentage of the measurand.
Thus, for example, a measurement uncertainty of 1.5 % means 1.5 × 0.01 × q, where q is the quantity value.

The notation Q[a, b] stands for the root-sum-square of the terms between brackets: $Q[a, b] = [a^2 + b^2]^{1/2}$
