### Flexible Scope

Flexible scope enables ExVeritas Limited to include certification for the same or similar schemes against standards that are not specifically listed in this schedule, providing that:

- New revisions of product standards (where the product standard is already included in the ISO/IEC 17065 schedule) and the changes do not affect the technical requirements of the scheme and/or the competence requirements.
- New standards that are technically equivalent to the standards already included under ExVeritas Limited accredited scope and where competence requirements for the new standard have already been demonstrated.

The flexible scope is managed through in-house procedure OP-11-98 for flexible accreditation scope, which defines the boundaries of technical equivalence, and the list of standards implemented under the flexible scope are detailed in the Register of Flexible FoP-11-99.

The flexible scope does not extend to include UKAB related activities as detailed in the Approved Body section of the schedule below.

Information about flexible scopes of accreditation is available in UKAS publication GEN 4.
